

## Java

```
class Solution {  
    public boolean[] isArraySpecial(int[] nums, int[][] queries) {  
  
    }  
}
```

---

## JavaScript

```
/**  
 * @param {number[]} nums  
 * @param {number[][]} queries  
 * @return {boolean[]}  
 */  
var isArraySpecial = function(nums, queries) {  
  
};
```

---

## TypeScript

```
function isArraySpecial(nums: number[], queries: number[][]): boolean[] {  
  
};
```

---

## C++

```
class Solution {
```

```
public:
    vector<bool> isArraySpecial(vector<int>& nums, vector<vector<int>>& queries) {

    }
};
```

---

## C#

```
public class Solution {
    public bool[] IsArraySpecial(int[] nums, int[][] queries) {

    }
}
```

---

## Kotlin

```
class Solution {
    fun isArraySpecial(nums: IntArray, queries: Array<IntArray>): BooleanArray {

    }
}
```

---

## Go

```
func isArraySpecial(nums []int, queries [][]int) []bool {

}
```

---
